

## Chapter 8: Typed Arithmetic Expressions

Types
The Typing Relation
Safety = Progress + Preservation

#### Reall: Syntax and Semantics

**†** ::=

```
true
           false
           if t then t else t
           0
           succ t
           pred t
           iszero t
Evaluation
                                                t \rightarrow t'
   if true then t_2 else t_3 \rightarrow t_2
                                             (E-IFTRUE)
  if false then t_2 else t_3 \rightarrow t_3 (E-IFFALSE)
                 \mathsf{t}_1 \to \mathsf{t}_1'
                                                    (E-IF)
        if t_1 then t_2 else t_3
      \rightarrow if t'_1 then t_2 else t_3
```

$$\frac{t_1 \rightarrow t_1'}{\text{succ } t_1 \rightarrow \text{succ } t_1'} \qquad \text{(E-SUCC)}$$

$$\text{pred } 0 \rightarrow 0 \qquad \text{(E-PREDZERO)}$$

$$\text{pred } (\text{succ } \text{nv}_1) \rightarrow \text{nv}_1 \qquad \text{(E-PREDSUCC)}$$

$$\frac{t_1 \rightarrow t_1'}{\text{pred } t_1 \rightarrow \text{pred } t_1'} \qquad \text{(E-PRED)}$$

$$\text{iszero } 0 \rightarrow \text{true} \qquad \text{(E-ISZEROZERO)}$$

$$\text{iszero } (\text{succ } \text{nv}_1) \rightarrow \text{false} \qquad \text{(E-ISZEROSUCC)}$$

$$\frac{t_1 \rightarrow t_1'}{\text{iszero } t_1 \rightarrow \text{iszero } t_1'} \qquad \text{(E-ISZERO)}$$

#### **Evaluation Results**

#### Values

• Get stuck (i.e., pred false)

values:
true value
false value
numeric value
numeric values:
zero value
successor value

#### Types of Terms

 Can we tell, without actually evaluating a term, that the term evaluation will not get stuck?

- Distinguish two types of terms:
  - Nat: terms whose results will be a numeric value
  - Bool: terms whose results will be a Boolean value
- "a term t has type T" means that t
   "obviously" (statically) evaluates to a value of T
  - if true then false else true has type Bool
  - pred (succ (pred (succ 0))) has type Nat

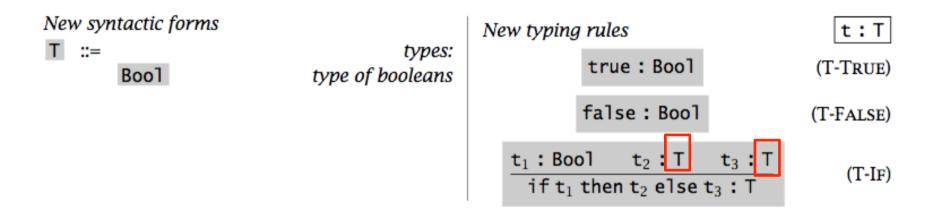

The Typing Relation: t: T

# Typing Rule for Booleans

# Typing Rules for Numbers

New syntactic forms

T ::= ... types:

Nat type of natural numbers

New typing rules t:T

0: Nat (T-ZERO)

 $\frac{\mathsf{t}_1 : \mathsf{Nat}}{\mathsf{succ}\; \mathsf{t}_1 : \mathsf{Nat}}$ 

(T-Succ)

 $\frac{\mathsf{t}_1 : \mathsf{Nat}}{\mathsf{pred}\; \mathsf{t}_1 : \mathsf{Nat}}$ 

(T-PRED)

 $\frac{\mathtt{t}_1 : \mathtt{Nat}}{\mathtt{iszero} \ \mathtt{t}_1 : \mathtt{Bool}}$ 

(T-IsZero)

#### Typing Relation: Formal Definition

- **Definition**: the typing relation for arithmetic expressions is the smallest binary relation between terms and types satisfying all instances of the typing rules.
- A term t is typable (or well typed) if there is some T such that t: T.

#### Inversion Lemma (Generation Lemma)

- Given a valid typing statement, it shows
  - how a proof of this statement could have been generated;
  - a recursive algorithm for calculating the types of terms.

```
    LEMMA [INVERSION OF THE TYPING RELATION]:
    If true: R, then R = Bool.
    If false: R, then R = Bool.
    If if t<sub>1</sub> then t<sub>2</sub> else t<sub>3</sub>: R, then t<sub>1</sub>: Bool, t<sub>2</sub>: R, and t<sub>3</sub>: R.
    If 0: R, then R = Nat.
    If succ t<sub>1</sub>: R, then R = Nat and t<sub>1</sub>: Nat.
    If pred t<sub>1</sub>: R, then R = Nat and t<sub>1</sub>: Nat.
    If iszero t<sub>1</sub>: R, then R = Bool and t<sub>1</sub>: Nat.
```

# **Typing Derivation**

Statements are formal assertions about the typing of programs. Typing rules are implications between statements Derivations are deductions based on typing rules.

## Uniqueness of Types

• **Theorem** [Uniqueness of Types]: Each term t has at most one type. That is, if t is typable, then its type is unique.

 Note: later on, we may have a type system where a term may have many types.

Safety = Progress + Preservation

## Safety (Soundness)

- By safety, it means well-typed terms do not "go wrong".
- By "go wrong", it means reaching a "stuck state" that is not a final value but where the evaluation rules do not tell what to do next.

# Safety + Progress + Preservation

Well-typed terms do not get stuck

- Progress: A well-typed term is not stuck (either it is a value or it can take a step according to the evaluation rules).
- Preservation: If a well-typed term takes a step of evaluation, then the resulting term is also well typed.

#### Canonical Form

- Lemma [Canonical Forms]:
  - If v is a value of type Bool, then v is either true or false.
  - If v is a value of type Nat, then v is a numeric value according to the grammar for nv.

```
        values:

        true
        true value

        false
        false value

        nv
        numeric value

        nv ::=
        numeric values:

        o
        zero value

        succ nv
        successor value
```

#### **Progress**

 Theorem [Progress]: Suppose t is a well-typed term (that is, t: T for some T). Then either t is a value or else there is some t with t

Proof: By induction on a derivation of t : T.

#### Preservation

• **Theorem** [Preservation]:

```
If t: T and t , then t: T.
```

Proof: By induction on a derivation of t : T.

Note: The preservation theorem is often called subject reduction property (or subject evaluation property)

#### Homework

- Read Chapter 8.
- Do Exercises 8.3.7

8.3.7 EXERCISE [RECOMMENDED, ★★]: Suppose our evaluation relation is defined in the big-step style, as in Exercise 3.5.17. How should the intuitive property of type safety be formalized?
